SOLUTION

Question 1: Short answer questions. **[5 point]**

a. List three properties of information at Operational level of an organization.
b. List three types of architecture present in an organization.
c. Differentiate between structured and unstructured decisions (just in two lines).
d. What is an opportunity cost with respect to a business decision?
e. Why we need to engineer a process.

Question 2: Case Study. **[10 points]**

Part A)

Step 1 - Assess the current state: Review financial records, employee contracts, supplier agreements, and customer relationships.

Step 2 - Identify core processes: Determine the key processes that drive the business, such as procurement, logistics, sales, and customer service.

Step 3- Develop a transition plan: Create a plan to stabilize the business, communicate with stakeholders, and ensure continuity.

Step 4- Design a strategy for growth: Outline a plan to revive the business, expand operations, and increase revenue.

Conduct employee interviews to understand their roles, responsibilities, and concerns.
Review financial statements, contracts, and agreements to understand the company's obligations and commitments.

Research the market, industry trends, and competitors to identify opportunities and challenges.
By following this structured approach, you'll be able to assess the current state of the business, identify core processes, develop a transition plan, and design a strategy for growth. This will enable the son to take over the business with confidence and ensure its continued success.

Part B)

Step 2 - Identify core processes: Determine the key processes that drive the business, such as procurement, logistics, sales, and customer service.

Part C)
Initial Questions

What are the company's strengths, weaknesses, opportunities, and threats (SWOT analysis)?
