

What is React Router?

It is a is a fully-featured client and server-side routing library for React

Helps create and navigate between different URLs that make up your web application

Provides unique URLs for different components in the app and makes the UI easily shareable with other users

Course Content

Configuring routes

Navigating on button click

Navigating programmatically

Dynamic routes

Nested routes

Route parameters

Lazy loading

Authentication

And a lot more!

Configuring routes

Scenario

localhost:3000
